Dark Energy Power Generation

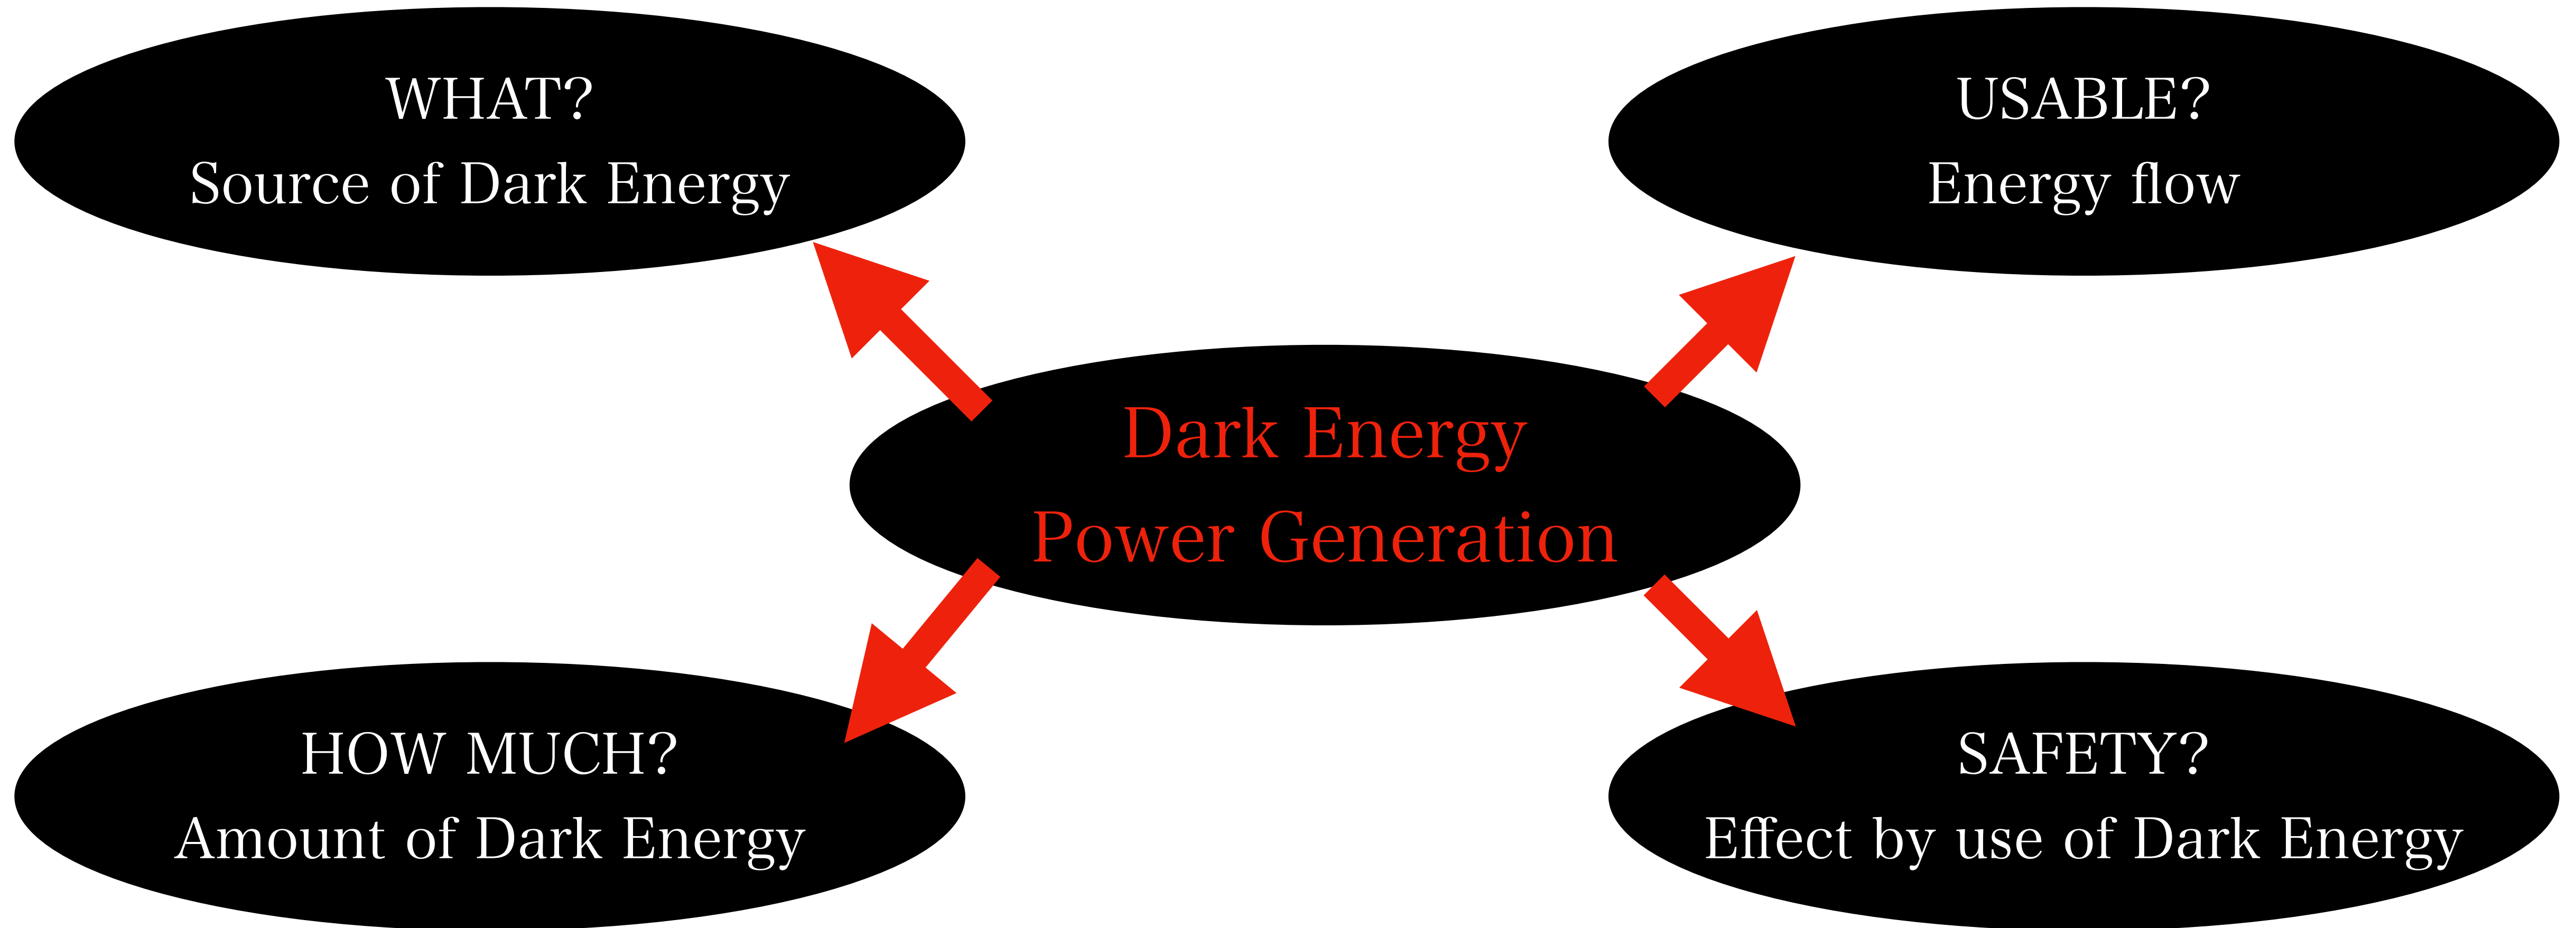

FAKE SCIENCE

Dark Energy (DE) :It causes the cosmic expansion and accounts for 70 % of the current energy in our universe. However, the almost all its physics is unknown.

DE Power Generation (DEPG) :This is the new power generation method that uses DE as an alternative energy source. If realized, it would be a major innovation in energy sector.

Problems of DEPG

FAKE SCIENCE

The First Step of Project

FAKE SCIENCE

THE FIRST STEP: Two tests

Cosmological Tests of DE energy flow

:By using the cosmological observational data, I will constraint on the amount of DE energy flow. Whether DE can be used as the energy source of power generation or not depends on whether the DE energy flow exists or not.

Tests for the amount of DE

:I will estimate the amount of energy that we can use. After that, I will discuss whether it is enough for human's society or not.
